Solve inequalities that take two steps to solve. For example, solve $3x + 2 > 5$. If you're seeing this message, it means we're having trouble loading external resources on our website. Two-step inequalities are to one-step inequalities what two-step equations are to one-step equations – the same thing, but a bit more work is needed in order to solve them. Two-step inequalities are very easy to solve and the rules you have to adhere to are the same as for the one-step inequalities – remember... $2x + 2 < 6$ $2x < 3$ That is, the inequality is true for all values of x which are less than 3 . Therefore, the solutions to the inequality $2x + 1 < 7$ are all numbers less than 3 . , 2 Step Inequalities.
