A special right triangle is a right triangle with some regular feature that makes calculations on the triangle easier, or for which simple formulas exist. For example, a right triangle may have angles that form simple relationships, such as $45^\circ-45^\circ-90^\circ$. This is called an "angle-based" right triangle. A right triangle is a triangle with an angle of 90 degrees ($\pi/2$ radians). The sides a , b , and c of such a triangle satisfy the Pythagorean theorem $a^2+b^2=c^2$, (1) where the largest side is conventionally denoted c and is called the hypotenuse. The other two sides of lengths a and b are called legs, or sometimes catheti. The favorite A-level math exam question of the protagonist Christopher in ...The right triangle calculator will help you find the lengths of the sides of a right-angled triangle. This triangle solver will also teach you how to find the area of a right triangle as well as give plenty of information about the practical uses of a right triangle. A triangle is a polygon with three edges and three vertices. It is one of the basic shapes in geometry. A triangle with vertices A , B , and C is denoted $\triangle ABC$. In Euclidean geometry any three points, when non-collinear, determine a unique triangle and simultaneously, a unique plane (i.e. a two-dimensional Euclidean space). In other words, there is only one plane that contains that triangle, and every ... , 8 Special Right Triangle.
