Practice rate problems 2 with Khan Academy's free online exercises. If you're seeing this message, it means we're having trouble loading external resources on our website. If you're behind a web filter, please make sure that the domains \*.kastatic.org and \*.kasandbox.org are unblocked. Rate Word Problems - Problem 2. I know that for example when he went downstream it was equal to 288, so 288 is equal to R plus C times 12. I'm going to substitute in what I found about R. 288 is equal to, instead of R I'll use 2C. 2C plus C is 3C times 12, go through and do that multiplying 288 is equal to 36C. Rate word problems include problems dealing with rates, distances, time and wind or water current. Other types of word problems using systems of equations include money word problems and age word problems. Alright guys some of the most scary Math problems that you see in your Algebra classes have to do with rates, distances and time. For example, if he needs 10 hours to finish a job, then he can complete  $\frac{1}{10}$  (one tenth) of the job in 1 hour. If he needs 30 minutes (0.50 hours), then he can complete  $\frac{1}{0.50} = 2$  jobs in one hour. The same reasoning applies to worker B. What happens if they're working together? In this case we have to add their rate of work. Many people make the mistake of assuming that if A takes X hours, and B takes Y hours, then they both take X+Y hours., Algebra 2 Rate Word Problems.
