Download Determine The Quadrant In Which Each Angle Lies

To determine the quadrant of the angle in radians written in terms of pi, we divide the top half and the bottom half of circumference of the circle into the number of parts corresponding to the...Here we are going to see how to determine in which quadrant an angle lies. An angle is said to be in standard position if its vertex is at the origin and its initial side is along the positive x-axis. An angle is said to be in the first quadrant, if in the standard position, its terminal side falls in the first quadrant.The given angle may be in degrees or radians. Use of calculator to Find the Quadrant of an Angle 1 - Enter the angle: in Degrees top input. example 1250 in Radians second input as a fraction of ?: Example 27/5 ? or 1.2 ? then press the button "Find Quadrant" on the same row. If you enter a quadrantal angle, the axis is displayed., Determine The Quadrant In Which Each Angle Lies.
