

Download Factoring Polynomials Website

In this section we look at factoring polynomials a topic that will appear in pretty much every chapter in this course and so is vital that you understand it. We will discuss factoring out the greatest common factor, factoring by grouping, factoring quadratics and factoring polynomials with degree greater than 2. Factoring Polynomials Using the Greatest Common Factor (GCF) There are several methods that can be used when factoring polynomials. The method that you choose, depends on the make-up of the polynomial that you are factoring. In factoring polynomials it's sometimes handy to break up the work graphically. Lisa Nuss, a member of Sam Shah's New Blogger Initiation, shared a handy graphic organizer last week.. I struggle with factoring polynomials, myself, so I wanted to give it a try. It started out easy. I started factoring polynomials with 1 as the leading coefficient (i.e. x^2 has no messy number in front of it). Learn how to factor a common factor out of a polynomial expression. For example, factor $6x^2+10x$ as $2x(3x+5)$., Factoring Polynomials Website.
