Recall that the coordinate plane has an x-axis that divides into a top and bottom half, and a y-axis dividing into the left and right half. Together they create the four quadrants of the plane. By convention they are numbered one to four, the first quadrant being to the top right, and then going counter-clockwise...The coordinates are kind of like clues telling you where to plot the x and y values, and when you see them on a questionnaire they can be called coordinates or an ordered pair. We plot x first, then y, that's the order; always starting from the bottom left hand corner - that's the place that we begin, at zero zero called the origin. Illustrated definition of Quadrant (graph): Any of the 4 areas made when we divide up a plane by an x and y axis, as shown. They are usually...First Quadrant Coordinate Plane Some of the worksheets for this concept are Coordinate graphing mystery picture work, Plotting points on a coordinate grid 1st quadrant only, Georgia standards of excellence curriculum frameworks, Math 6 notes the coordinate system, K 5mathteachingresources, Showing route positive s1, Note in each section do not connect the last point back, Grade 6 first quadrant coordinate system., First Quadrant Math.
