For instance, the general shape of the graph of $y = x^2$ is a parabola, and the general shape of the graph of $y = x^3$ is a . Similarly, the graphs of exponential equations have a general shape. It looks like this: Note that the graph has a curved shape. Also note that as the graph continues farther toward negative infinity, ... Exponents always can complicate equations, not because it complicates the concepts, but it does make the calculations more difficult for students. This series of worksheets will work on how to solve for exponential variables in algebraic expressions through the use of logarithmic tables and by balancing the equation., Graphing Simple Exponential Functions Worksheet.
