

Download How Do I Divide A Decimal By A Decimal

To divide decimals, start by moving the decimal point in the divisor all the way to the right so it's a whole number. Then, move the decimal in the dividend the same number of places to the right. Next, place a decimal point above the division bar directly on top of the decimal point in the dividend. Finally, divide the numbers as you normally would. So, how do we do a decimal division problem like 6.85 divided by .5? Well, we already know how to divide a decimal by a whole number -- and it was pretty easy.... So, let's just turn these problems into the easy kind! Move the decimal point in the divisor and dividend. Turn the divisor (the number you're dividing by) into a whole number by moving the decimal point all the way to the right. At the same time, move the decimal point in the dividend (the number you're dividing) the same number of places to the right. We need to divide 0.25 into 1.03075. Now the first thing you want to do when your divisor, the number that you're dividing into the other number, is a decimal, is to multiply it by 10 enough times so that it becomes a whole number so you can shift the decimal to the right., How Do I Divide A Decimal By A Decimal.
