

Download How Does Homeostasis Affect Cancer

Cancer has a massive impact on homeostasis. Cancer happens when cells are out of control and homeostasis is not strong enough to balance it out. How does cancer affect homeostasis? Cancer: Cancer is caused by uncontrolled cell growth. Cancer occurs due to exposure to carcinogens which cause mutations. This activity was designed to help students understand how metastasis (the spread of cancer cells) disrupts organ function and interferes with the maintenance of homeostasis. Students use their textbook and other resources to do research on the normal structure and function of different organ types., How Does Homeostasis Affect Cancer.
