# Download Interior Angles Of A Polygon With 6 Sides

Pentagon. A pentagon has 5 sides, and can be made from three triangles, so you know what ..... its interior angles add up to 3 × 180° = 540° And when it is regular (all angles the same), then each angle is 540° / 5 = 108° (Exercise: make sure each triangle here adds up to 180°, and check that the pentagon's interior angles add up to 540°)In elementary geometry, a polygon (/ ? p ? l ? ? ? n /) is a plane figure that is described by a finite number of straight line segments connected to form a closed polygonal chain or polygonal circuit.The solid plane region, the bounding circuit, or the two together, may be called a polygon.. The segments of a polygonal circuit are called its edges or sides, and the points where two edges ...How to Calculate the Sum of Interior Angles. A polygon is any closed figure with sides made from straight lines. At each vertex of a polygon, there is both an interior and exterior angle, corresponding to the angles on the inside and...The last entry includes the general term for a polygon with n number of sides. Polygons aren't limited to the common ones we know but can get pretty complex and have as many sides as are needed., Interior Angles Of A Polygon With 6 Sides.
