

Download Invertebrate Animals For Kids

Invertebrates. There are over 1 million species of insects including such animals as the grasshopper, dragonfly, yellow jacket, butterfly, and praying mantis. Spiders, Centipedes and Scorpions - These animals are all part of the arthropod phylum. Spiders and scorpions are arachnids because they have eight legs. Eight-legged spiders are fearsome hunters of the invertebrate world. Spiders › Shells and exoskeletons › Many invertebrates have hard shells or external skeletons (exoskeletons) to protect their soft bodies. Shells and exoskeletons › Centipedes and millipedes › Centipedes and millipedes are easy to recognize thanks to their many pairs of legs. Yes, many of the sponges we use in the shower are invertebrate animals. The jellyfish are invertebrate animals that live in the ocean. Their bodies are gelatinous and have tentacles. The main phyla (groups) of invertebrate animals are: Annelida: segmented worms. Arthropods: (arachnids, crustaceans, insects, and others); Brachiopods: the lampshells. Bryozoa: sea mats or moss animals (sometimes they look like corals). Cnidarians: jellyfish, sea anemones, hydroids. ..., Invertebrate Animals For Kids.
