

Download Kinetic Energy Marble Experiment

Grab some marbles! This simple science experiment is such an easy and fascinating way to demonstrate how energy is transferred from one object to another. Energy is defined as the ability to do work. We learned about the difference between potential energy (stored energy), and kinetic energy (the ...Build a marble roller coaster from foam tubing and masking tape. Incorporate features of real roller coasters and learn about forces on the marble or energy transformation. The Gauss Rifle also known as the Gaussian gun is a very simple experiment that uses a magnetic chain reaction to launch a steel marble at a target at high speed. Our latest STEM activity for kids is all about physics! You'll be creating a homemade marble run and exploring what happens to the marble as you make changes to the track. (It's similar to how a roller coaster works!) This activity correlates with Next Generation Science Standards Kindergarten: NGSS K-PS2-2), Kinetic Energy Marble Experiment.
