

Download Polygon Word Problems With Answers

Problem 3 Find the area of a dodecagon of side 6 mm. (approximate your answer to one decimal place).

Solution to Problem 3: A dodecagon is a regular polygon with 12 sides and the central angle opposite one side of the polygon is given by. $t = 360^\circ / 12 = 30^\circ$; We now use the formula for the area when the side of the regular polygon is known. In this worksheet, students will follow four steps to find the perimeter of polygons in word problems. Make sure they look for the key words to help them get the correct answers! Download free worksheet Assign digitally ... A tricky geometry word problem Word problem #5: The midpoint of a segment is (3, 6). If one endpoint is (4, 7), what is the other endpoint? Suppose x_1 is the missing x-coordinate of the other endpoint. To get the x-coordinate of the midpoint, you will need to do the math below: Perimeter of Polygons In Word Problems. ... Polygon Perimeter Step-by-step Lesson- Its presented in a simple fashion to help students transition from rectangles to polygons or other shapes. ... Matching Worksheet - Match the word problems to their answers. Answer Keys View Answer Keys- All the answer keys in one file., Polygon Word Problems With Answers.
