

Download Rectangle Lines Of Symmetry

Here my dog "Flame" has her face made perfectly symmetrical with a bit of photo magic. The white line down the center is the Line of Symmetry. In Euclidean plane geometry, a rectangle is a quadrilateral with four right angles. It can also be defined as an equiangular quadrilateral, since equiangular means that all of its angles are equal ($360^\circ/4 = 90^\circ$). It can also be defined as a parallelogram containing a right angle. 1. is A 2. is B 3. is C I'm not really sure if these are correct. I hope they are and I hope they help you out. Have students find lines of symmetry with the capital letters of the alphabet. Some fonts are better than others, so choose carefully. They can do a venn digram of letters with vertical vs. horizontal lines of symmetry., Rectangle Lines Of Symmetry.
