

Download Renewable Nonrenewable Wool

Absolutely. Cotton is sustainable, renewable, and biodegradable, making it an excellent choice as an environmentally-friendly fiber throughout its entire product life cycle. Cellulose being the most abundant polysaccharide on the biosphere are being used as an attractive reinforcing materials in the form of cellulose fibers on account of so many advantages viz. low weight, ubiquitous, biodegradable, cost-effective, renewable, low abrasive nature, interesting specific properties, since these are waste biomass and exhibit good mechanical properties [15,16]. Bioplastics are plastics derived from renewable biomass sources, such as vegetable fats and oils, corn starch, straw, woodchips, food waste, etc. Bioplastic can be made from agricultural by-products and also from used plastic bottles and other containers using microorganisms. Common plastics, such as fossil-fuel plastics (also called petrobased polymers) are derived from petroleum or natural gas. Natural Resources & Synthetic Materials NGSS Standard: MS-PS1-3. Gather and make sense of information to describe that synthetic materials come from natural resources and impact society., Renewable Nonrenewable Wool.
