Definition and properties of scalene triangles. Try this Drag the orange dots on each vertex to reshape the triangle. Try to establish a triangle that is not scalene. Sometimes called an irregular triangle. The perimeter of a scalene triangle is 14.5 cm. The longest side is twice that of the shortest side. Which equation can be used to find the side lengths if the longest side measures 6.2 cm? Equilateral, Isosceles and Scalene. There are three special names given to triangles that tell how many sides (or angles) are equal. There can be 3, 2 or no equal sides/angles: The triangle is one of the basic geometric shapes in geometry. It has 3 sides with 3 vertices (corners). The Scalene triangles is but one category of triangles which have 3 unequal sides and 3 unequal angles., Scalene Triangle Area And Perimeter.
