Use your knowledge of 30-60-90 and 45-45-90 triangles to solve some problems. A special right triangle is a right triangle with some regular feature that makes calculations on the triangle easier, or for which simple formulas exist. For example, a right triangle may have angles that form simple relationships, such as  $45^\circ-45^\circ-90^\circ$ . This is called an "angle-based" right triangle. Welcome to the presentation on 45-45-90 triangles. Let me write that down. How come the pen-- oh, there you go. 45-45-90 triangles. Or we could say 45-45-90 right triangles, but that might be redundant, because we know any angle that has a 90 degree measure in it is a right triangle.
