

Download The Indirect Proof Of The Statement Vertical Angles Are Congruent Begins With The Assumption That

State the assumption needed to begin an indirect proof of: Vertical angles are congruent. Vertical angles are not congruent. Vertical angles must be right angles. All vertical angles are supplementary. Vertical angles are adjacent. thanks! <3Question: The indirect proof of the statement "Vertical angles are congruent" begins with the assumption that. Answer options: Two angles are vertical. two angles are congruent. two angles are not congruent. two angles are not congruent. I got the answer right but I do not understand why!The indirect proof of the statement "Vertical angles are congruent" begins with the assumption that... (A) two angles are not vertical (B) two angles are vertical (C) two angles are not congruent (D) two angles are congruentIf two angles are supplements of the same angle (or congruent angles) then the two angles are congruent. Congruent Complement Theorem If two angles are complements of the same angles (or of congruent angles) then the two angles are congruent., The Indirect Proof Of The Statement Vertical Angles Are Congruent Begins With The Assumption That.
