Definition: The bottom of a shape, solid or three dimensional object. The base is what the object 'rests' on. Base is used in polygons, shapes and solids. The base is used as a reference side for other measurements, most often used in triangles. The base is the surface of the object that it stands on or it is the bottom line. In mathematics, a base or radix is the number of different digits or combination of digits and letters that a system of counting uses to represent numbers.
